Introduction

What is MAC?

The United States Postal Service, in cooperation with the mailing industry, has developed a process of evaluating manifesting software known as Manifest Analysis and Certification (MAC) certification. The process is available only to software and hardware manufacturers who actually develop manifest software or manufacture manifesting equipment either for retail or for internal use. MAC provides a common platform to measure the quality of manifest products and determines their accuracy in accordance with requirements set forth in the *Domestic Mail Manual* (DMM). The purpose of MAC is to improve the accuracy of manifested mailings, thereby improving the flow of your mail.

The MAC Certified Developers List contains products that have passed the rigorous testing procedures of the MAC program. The list is grouped by type of developer and is organized alphabetically by company name. Each product's listing includes sales contact information and indicates the certified manifest categories, options supported, hardware, software platforms, and price range. Please keep in mind that the product information is for quick reference purposes only; contact the developer directly for specifics concerning their product.

Developer Categories

Software Developers for Retail

Companies whose products have successfully completed the MAC certification process and are developed for use/purchase by the general mailing public.

In-House/Proprietary Use

Companies that have successfully completed the MAC certification process and manifest their own mailings.
